● About this template

4

I designed this template for my PhD defense with the following features :

- Color theme matching the TIMA logo colors. Integration of TIMA logo.
- The presentation structure defines the frame titles.
- Progression in the presentation explicited at global level (slide numbering), section level (section names) and subsection level (progress bar per section).
- Fast navigation through slides.

Enjoy !

Block

Alert block

Example block

●○ Frame elements are defined by presentation structure

- Section (short) names are in the top blue box. The current section is highlighted.
- The current subsection name is the frametitle in the turquoise box.
- If defined, subsubsection name is appended to the frametitle.

Like this.

- Navigation throughout frames

- Section names are clickable to move to the corresponding section.
- Circles left to the frametitle allow browsing subsections of the current section.
- The logo to the presentation start.

Github : `https://github.com/jsimatic/beamer_tima`

Feel free to suggest improvements.

Known caveats

- The TIMA logo is a modified version. The font has been altered during vectorization. The logo has been cropped on the left to get the right blue/turquoise ratio.
- Spacing in the section bar is static. The width of the bar can be changed at `template/beamerouterthemesmalltree.sty` (line 131).
- Slide numbering may not correctly work with appendices.
- Dirty relative import of custom color and outer themes.
